

AI-GENERATED REPRESENTATION

# AI Notetakers

The rise and risk of AI notetakers/wearables for small businesses and organizations.

Compiled & distilled by:  **harrier**

# Introduction & Legal Risks

AI notetakers are **small, often silent recorders** that can capture full conversations. Their use can lead to serious legal implications, primarily due to the **lack of consent** from participants, and they may be hard to detect.

# RECORDING YOU

These devices often operate **silently**. Many are designed to be subtle and on for long periods of time.

This allows covert capture of sensitive discussions up to a **10-15 foot range**.

# RISKS TO SMALL ORGS & BUSINESES?

## LOSS OF PRIVATE CONVERSATIONS

Recorded audio can be wirelessly transferred to the cloud, creating a chance for interception. This data transfer is a critical point for potential data theft.

---

## BOARD MEETINGS & DISCUSSIONS

Potentially sensitive information may be recorded without knowledge of all participants. This could include **board meetings, customer conversations, and private employee discussions.**

# FIRST STEPS TO ADDRESS?

## **BECOME FAMILIAR WITH THE TECHNOLOGY**

Conversations may be recorded, uploaded, and distributed at lightning speed, including proprietary information. Hours of conversations distilled into bullet points in seconds! Get used to it, its here.

## **MAKE KEY POLICY CHANGES AS NEEDED**

Ensure your core leadership teams, board members, and other stakeholders are informed. Trust and transparency mean different things in this new world. The thing that makes them potentially useful is what also makes them a risk for your business.
